Summary

.NET Backend Developer building microservices for a healthcare care-planning and scheduling platform using C#, .NET 9, ASP.NET Core Web API, PostgreSQL, and Dapper. Experienced with CQRS (MediatR), FluentValidation, JWT authentication, Ocelot API Gateway, Apache Kafka event-driven integration, Redis caching, and PL/pgSQL stored procedures. Ships features through Docker and Azure DevOps CI/CD pipelines across Dev, QA, UAT, Staging, and Production environments. Also skilled in Java, Spring Boot, and React.js full-stack development.

Experience

.NET Developer

Aug 2025 – Present

Zest India IT Services, Pune, India

Project: CarePlanner – Healthcare care-planning and appointment scheduling platform (C#, .NET 9, ASP.NET Core Web API, PostgreSQL, Dapper, Kafka, Docker, Azure DevOps)

- Built and enhanced RESTful APIs across 4 ASP.NET Core microservices (API Gateway, Appointment, CRM, Document) using CQRS with MediatR commands, queries, and handlers, keeping business logic separate from controllers.
- Developed data access with Dapper and Npgsql over PostgreSQL, and wrote and optimized PL/pgSQL stored procedures and functions for appointments, recurrence, billing, and client authorizations.
- Implemented recurring appointment logic with Ical.Net (RRULE), including “edit this and following” series splits, and fixed date-boundary defects such as drive-time calculations for appointments crossing midnight.
- Built bi-directional appointment and document synchronization between CarePlanner and the Aloha practice-management system using Apache Kafka (MassTransit) producers and consumers with CloudEvents messages.
- Configured Ocelot API Gateway routes with JWT Bearer authentication, per-route scopes, and Polly resilience, and resolved 401 authorization failures on document endpoints across QA, Staging, and Production.
- Enforced role- and permission-based access control (roles, user roles, role permissions) and request validation with FluentValidation, returning consistent HTTP status codes and error responses.
- Delivered CRM and scheduling modules including clients, staff, payers, services, earning codes, billing rules, client authorizations, and dynamic custom forms and document management.
- Improved observability and performance using Serilog with Grafana Loki structured logging, Redis distributed caching, and ASP.NET Core health checks.
- Containerized services with Docker multi-stage builds and shipped through Azure DevOps Pipelines to Azure Container Registry, with branch-based deployments to Dev, QA, UAT, Staging, and Production.
- Documented and tested APIs with Swagger/OpenAPI and Postman, traced defects end to end across the API, handler, and database layers, and collaborated in Agile/Scrum sprints with Git pull requests and code reviews.

Skills

Languages: C#, Java, SQL, JavaScript, HTML, CSS

Backend: .NET 9, ASP.NET Core Web API, RESTful APIs, Microservices, MediatR (CQRS), FluentValidation, AutoMapper, Dapper, Entity Framework Core, LINQ, Spring Boot, Spring MVC, Spring Security

Frontend: React.js, JavaScript, HTML, CSS

Databases: PostgreSQL, PL/pgSQL, SQL Server, MySQL, MongoDB, Stored Procedures, Query Optimization

Messaging & Caching: Apache Kafka, MassTransit, CloudEvents, Redis

Security: JWT Authentication, OAuth Bearer Tokens, Role-Based Access Control (RBAC), Ocelot API Gateway

DevOps & Cloud: Docker, Azure DevOps Pipelines (CI/CD), Azure Container Registry, Azure Artifacts (NuGet)

Tools: Git, GitHub, Visual Studio, VS Code, IntelliJ IDEA, Swagger/OpenAPI, Postman, Serilog, Grafana Loki

Practices: OOP, SOLID Principles, Dependency Injection, Repository Pattern, Clean/Layered Architecture, Data Structures & Algorithms, Debugging, Code Reviews, Agile/Scrum

Projects

Eatzilla – Online Food Delivery Platform (PG-DAC Academic Project)

github.com/74717sarang/Eatzilla

2024

- Built a full-stack food delivery application with a Java/Spring Boot REST backend, React.js frontend, and MySQL database.
- Implemented Spring Security with JWT authentication and role-based access control for customer, restaurant, and admin roles.
- Developed REST APIs for registration, menu browsing, cart management, order placement, and order tracking.
- Designed the relational MySQL schema with parameterized data access, and managed code in Git/GitHub using iterative Agile development.

Education

PG Diploma in Advanced Computing (PG-DAC), C-DAC

Mar 2024 – Sep 2024

Institute for Advanced Computing & Software Development (IACSD), Akurdi, Pune | Score: 65%

Bachelor of Technology

Sep 2018 – Jun 2022

Dr. Daulatrao Aher College of Engineering, Karad | Score: 75%

Certifications

- **Core Java** – Sunbeam IT Park, Hinjawadi, Pune
- **SQL (Advanced)** – HackerRank
